TOWN CONSERVATION COMMISSION

REMARKS
 Dear Commissioners
 This report of plan are provided as the first in a series of technical responses we will be providing to address all issues raised in March 9, 2007 Horsley Witten Group review letter. This report of plan are provided to respond specifically to item 3, "land subject to Coastal Storm Flowage" in the Horsley Witten letter. Dr. Rosen and I will be available at the 4/2/07 hearing to present this information.

Scituate Massachusetts

Re: Herring Brook Meadow Project

Commissioners:

This letter is in response to concerns raised by the Office of Coastal Zone Management in an email from Rebecca Haney to Michael Clark, Acting Chair, Scituate Conservation Commission, regarding clarifications of the proposed project, Herring Meadow Brook Residential Community, Scituate, Massachusetts. While the project submission in the Notice of Intent contains full documentation for the project, a composite of site conditions, which overlays an aerial photo, topography, flood boundaries, and property boundaries, and proposed area of development, is submitted to further clarify the issues.

1.0.0 Topography: At the request of CZM, the site topography has been extended on this composite by adding information from the Town topographic base. The area of the project is on the lower portions of a topographic slope which rises to a peak west of Rt 3A and a smaller peak south of the site east of Rt 3A. These slopes are composed of glaciofluvial kame and ground moraine. North of the kame deposits (roughly above 10 ft elevation) is a large flat portion of the site (the open field) that consists of Outwash Plain deposits.
